CYBERSECURITY ANALYST — Blue Team Operations, Identity Threat Detection, EDR Visibility

Hands-on blue team practitioner who **lives in authentication logs and endpoint telemetry**, identifying compromised credentials, privileged-account misuse, and abnormal access patterns in real-time. Strong experience triaging SOC alerts, correlating Splunk data with EDR sensor coverage, validating logging/telemetry health, and executing playbooks for **containment, credential resets, and remediation coordination**. Recognized for improving detection quality, reducing false positives, and strengthening identity security by **closing visibility gaps, refining playbooks, and contributing new detection use-cases mapped to MITRE ATT&CK** — all while maintaining disciplined case notes, escalation records, and MTTR/MTTD reporting.

DoD 8570 compliant: CISA and Security+

Certifications:

- Certified Information Systems Auditor (CISA)
- Security + (CompTIA)
- Enterprise Mission Assurance Support Service (eMASS) Training
- Cybersecurity Hands-On Practicum Series (CHOPS), Arizona State University
- Phlebotomy Technician Certification, University of Alabama (September - 2003)
- Certified Nurse Aide, American Red Cross (Augusta - 2002)
- High School Diploma, S.R. Butler (May - 2002)

Tools & Platforms:

Splunk (SIEM) • Azure Portal & Virtual Machines • Tenable.sc • Tenable Nessus • Git & GitHub • Visual Studio Code • React • Vite • Wireshark • Command Line / Terminal • Windows & Linux OS • Jira • Linux • Slack • Microsoft Office Suite • EMR/EHR Systems • Agile/Scrum Collaboration Tools • Ticketing / Case Documentation

Cybersecurity & GRC Skills:

Governance, Risk & Compliance (GRC) • Vulnerability Analysis • SOC Workflow Awareness • Threat Hunting Concepts • Incident Response Fundamentals • Log & Network Traffic Review • CVE Research • MITRE ATT&CK Familiarity • Identity & Access Management (IAM) Basics • Risk Assessment & Documentation • Security Controls & Policy Awareness

Software Engineering Skills:

JavaScript • React • HTML/CSS • APIs • Git Version Control • Agile Collaboration • Pair Programming • Debugging Fundamentals • Front-End Development Foundations • Responsive Design Principles • Problem-Solving Algorithms & Logic

PROFESSIONAL EXPERIENCE

Cybersecurity Analyst (Vulnerability Management & SecOps Intern)

(40 hours per week)

December 2023-Present

LOG (N) Pacific-Remote

- Executing credentialed vulnerability scans using Tenable.sc and Nessus across Windows and Linux environments, generating actionable reporting and findings documentation.
- Conducting vulnerability assessments and CVE research to validate results, prioritize remediation, and align risk scoring to impact level.
- Producing detailed scan summaries, remediation notes, and lifecycle tracking to support vulnerability reduction efforts.
- Performing risk scoring and patch prioritization workflows to guide remediation focus and strengthen security posture.

- Developing strong communication and reporting skills supporting transparency, documentation accuracy, and collaboration with security stakeholders.
- Analyzing Splunk SIEM logs to investigate suspicious events, interpret alerts, and support incident triage processes.
- Executing threat-hunting exercises and security event analysis focused on brute-force attempts, persistence activity, and abnormal system behavior.
- Conducting SOC workflow tasks including alert review, investigation steps, structured documentation, and escalation logic.
- Utilizing MITRE ATT&CK mapping and threat intelligence resources to identify techniques, evaluate indicators, and contextualize findings.

Software Engineer (Apprenticeship)

(40 hours per week)

September 2025-December 2025

Techtonica-Remote

- Completed full-stack JavaScript curriculum including React, JS logic, Git workflows, and Agile teamwork.
- Collaborated in pair programming, debugging sessions, and code reviews.
- Developed dynamic UI components and project deliverables.
- Completed cloud-based full-stack JavaScript program with emphasis on React development, Git workflows, and Agile team delivery.
- Built UX components, API integrations, and responsive interfaces within Vite/React environment.

Help Desk Technician

(40 hours per week)

April 2025-Present

Dream Believe Achieve Strategies-Arizona

- Manage daily support operations, providing first-line technical assistance for software, hardware, and network issues.
- Reset passwords, manage access permissions, and monitor user accounts across web-based applications.
- Conduct risk assessments, document incidents, and enforce policy adherence to security frameworks.
- Collaborate with IT and cybersecurity teams to improve response times and strengthen system reliability.
- Deliver empathetic, professional support, ensuring a positive client experience.

Phlebotomist Supervisor

(40 hours per week)

April 2021-April 2025

Quest Diagnostics, Synergy Laboratories, Lab Works-Huntsville, AL

- Trained and mentored new staff on electronic systems, HIPAA protocols, and secure data entry.
- Acted as on-site support resource for system errors, login issues, and workflow troubleshooting.
- Ensured accuracy and compliance in lab records and patient data.
- Processed specimens and managed electronic records within LIS systems.
- Escalated technical and data discrepancies to IT teams for resolution.
- Supported IT operations by documenting system errors and monitoring data accuracy.
- Applied privacy controls and risk mitigation practices across patient records.
- Spearheaded initiatives to improve workflow efficiency, resulting in a 25% reduction in patient wait times and a 30% increase in processing speed for lab results.
- Led cross-functional teams in identifying and resolving billing discrepancies, collaborating directly with insurance carriers to reprocess claims and reduce claim denial rates by 18%.
- Drafted and managed appeals for denied claims, utilizing an in-depth understanding of CMS 1500 forms and medical coding, leading to a 40% increase in claim approvals.
- Delivered comprehensive training to staff on best practices for patient care, specimen handling, and accurate documentation, ensuring seamless integration of healthcare systems and processes.
- Cultivated strong relationships with healthcare providers and insurance representatives, fostering open lines of communication and ensuring that all claims were processed swiftly and accurately.
- Managed daily patient interactions, obtaining accurate demographic and insurance data for billing.

- Identified and corrected errors on CMS 1500 claim forms, reducing claim denials and maximizing revenue.
- Assisted billing departments by providing accurate test orders and procedural documentation.
- Prioritized workflows based on claims processing urgency, ensuring timely reimbursement and improved revenue cycle management.

Phlebotomist Supervisor

(40 hours per week)

October 2003-2021

Various Healthcare Organizations and Private Medical Offices-Huntsville, AL

- Led phlebotomy team in ensuring quality assurance and compliance with regulatory guidelines.
- Audited insurance claims for errors and discrepancies, collaborating with the billing department to rectify issues.
- Standardized phlebotomy procedures, reducing errors and improving patient care efficiency.
- Provided mentorship to junior staff, promoting excellence in specimen collection and patient interaction.
- Spearheaded compliance initiatives, ensuring adherence to HIPAA and OSHA regulations.
- Performed accurate blood draws (venipuncture and capillary) for diagnostic testing, ensuring high-quality specimens while prioritizing patient comfort and care.
- Labeled and processed blood samples efficiently, following strict protocols for handling and safety.
- Maintained accurate patient records in the electronic health record (EHR) system, ensuring confidentiality and compliance with HIPAA regulations.
- Educated patients on the blood collection process and alleviated concerns, ensuring positive patient experiences.
- Trained new phlebotomists on blood collection techniques, patient handling, and infection control practices.
- Managed day-to-day operations of the radiology department, overseeing scheduling, patient flow, and coordinating imaging services.
- Administered the efficient use of radiology equipment, ensuring proper maintenance and timely servicing to maintain operational readiness.
- Coordinated with medical staff and radiologists to ensure accurate, timely, and high-quality imaging results for patient care.
- Maintained patient records, ensuring the accurate transmission of imaging results to physicians and other medical staff in a secure and timely manner.
- Implemented radiology department protocols, ensuring compliance with safety, quality control, and regulatory standards.
- Oversaw inventory and ordering of medical supplies and imaging equipment, ensuring the department had the necessary resources for daily operations.
- Assisted with departmental billing, coding, and insurance verification for radiology procedures.
- Provided administrative support to radiologists and other medical staff, ensuring smooth workflow and optimal patient care.
- Trained and supported new staff in both phlebotomy and radiology administrative tasks, fostering team collaboration and operational excellence.

Cybersecurity & IT Projects

Cybersecurity Projects:

- Vulnerability Scanning & Reporting – Tenable.sc / Nessus. Built authenticated and unauthenticated scan profiles, exported findings, and wrote remediation instructions.
- SOC Event Investigation – Splunk SIEM. Reviewed event logs and alerts, conducted pattern analysis, and documented investigation outcomes.
- Threat-Hunting Exercises. Investigated indicators, brute-force patterns, and unauthorized login behavior using SIEM/OSINT tools.
- Cloud VM Deployment on Azure. Deployed Linux VMs and executed scanning, configuration, and SSH authentication workflows.
- CVE Research & Security Documentation. Analyzed vulnerabilities and wrote formally structured documentation and evidence summaries.
- Interpreted event IDs, validated indicators, and generated incident documentation reflecting SOC workflow structure. (Splunk)
- Produced scan reports, ranked vulnerabilities by CVSS score, associated CVEs, and recommended remediation.
- Configured SSH remote access controls, validated credential authentication, and evaluated secure configuration baselines.

- Removed insecure services (e.g., Wireshark), validated removal through rescan, and documented before/after risk reduction delta.
- Completed real SOC ticketing workflows including intake, triage, enrichment, action steps, escalations, and closeout reports.

Healthcare IT Integration Project

- Supported EHR and lab systems with technical troubleshooting and system access requests.
- Improved accuracy and data security through policy review and staff training.
